

You can achieve impressive **Clinical Results, Financial Gains, and Increased Patient Retention and Referrals**

prev next

Some of the first signs of disease are in your eyes.

glaucoma
retinal tears **eye melanoma**
heart disease retinal detachment
signs of stroke **diabetes** hypertension
blood cancer

Your retina is the only place in your body where a doctor can view nerves and blood vessels without invasive procedures. Nerve and blood vessel abnormalities can be one of the first signs of serious disease.

With an **optomap**, your doctor can see signs of conditions like diabetes, stroke, hypertension, heart disease, even cancer, as well as serious eye disorders *before you have symptoms*.^{*} **And early detection is key.** Are you getting the big picture?

^{*}Based on physician experiences.

Exciting new rental and purchase programs exclusive to Walmart

Let us help you choose the best option for your practice

- 👁️ **Ultra-widefield** imaging, high resolution digital image covering more than 82% or 200° of the retina. Disease detection from central pole to periphery
- 👁️ Image 25 patients and the technology pays for itself
- 👁️ Practice building technology that increases patient retention and referrals
- 👁️ Establish patient's baseline to track annually and early detection, to not only save lives, but educate the patient on wellness screening
- 👁️ **New-Optos OCT SLO** –ultra-high resolution OCT and SLO registration with eye tracking at an affordable price
